MENTAL HEALTH RISK PREDICTION

INDIVIDUAL WEEKLY PROGRESS REPORT — WEEK 1

University	IILM University, Greater Noida	**Session**	2026–27
Programme	B.Tech CSE	**Project Guide**	Ms. Renuka Thakur
Reporting Focus	Topic Finalisation, Problem Understanding and Abstract Preparation		

Objective: To understand the problem, establish the project's purpose, and prepare an initial abstract and project direction.

WEEKLY PROGRESS

Project topic and problem

The team discussed the need for accessible early awareness of mental-health concerns and framed the project as a machine-learning-based screening application. The intended output was a low, medium, or high risk category, clearly described as screening support—not a clinical diagnosis.

Abstract and initial scope

An initial abstract was drafted to explain the problem, the proposed use of a suitable dataset, the planned machine-learning approach, and the goal of presenting results through a simple application. The broad input-to-result flow was also discussed.

INDIVIDUAL TEAM MEMBER CONTRIBUTIONS

Bhoomi Srivastava (2410031296) — Helped organise the initial discussion, note the key project requirements, and identify report items that needed to be prepared, including the problem overview and abstract.

Shubham Manral (2410030301) — Considered the user's side of the application: what information a user might enter, how the screening steps should be presented, and how a result could be shown in clear, simple language.

Sagar Bisht (2410030282) — Discussed the broad application flow, including how user responses could be received and passed through the system for processing and a prediction result.

Nikhil Singh (2410030311) — Started identifying the data and machine-learning requirements for the project, including the need for a relevant dataset and a model capable of classifying risk categories.

Outcome and Next Step

The team agreed on the project direction and prepared the initial problem overview and abstract. Week 2 would focus on research papers and the literature review.

Team Members	Bhoomi Srivastava • Shubham Manral • Sagar Bisht • Nikhil Singh

MENTAL HEALTH RISK PREDICTION

INDIVIDUAL WEEKLY PROGRESS REPORT — WEEK 2

University	IILM University, Greater Noida	**Session**	2026–27
Programme	B.Tech CSE	**Project Guide**	Ms. Renuka Thakur
Reporting Focus	Research Papers, Literature Review and Technical Understanding		

Objective: To review existing work and identify technical, data-quality, privacy, and ethical considerations relevant to the project.

WEEKLY PROGRESS

Research reading

The team explored research themes related to machine-learning-based mental-health screening, at-risk students, social and behavioural indicators, feature selection, model interpretability, algorithmic bias, and privacy.

Research notes and report plan

The team noted that data quality and representativeness affect model performance, and that predictions should not be treated as a diagnosis. Research notes were organised for the literature survey and the planned report sections.

INDIVIDUAL TEAM MEMBER CONTRIBUTIONS

Bhoomi Srivastava (2410031296) — Helped organise the research notes, track the report sections still to be written, and arrange material so it could be used in the literature review and references.

Shubham Manral (2410030301) — Reviewed the planned user journey and considered how the interface should explain the screening process and communicate results without suggesting a definitive medical diagnosis.

Sagar Bisht (2410030282) — Reviewed the proposed flow between user input, application processing, and model output, and noted the backend functions the application would need to support.

Nikhil Singh (2410030311) — Focused on dataset and model-related research and noted candidate classifiers for later evaluation, including Logistic Regression, Support Vector Machines, Random Forest, and Gradient Boosting.

Outcome and Next Step

The team developed a stronger understanding of related research and key technical and ethical considerations. Week 3 would focus on structuring the report and defining the system workflow.

Team Members	Bhoomi Srivastava • Shubham Manral • Sagar Bisht • Nikhil Singh

MENTAL HEALTH RISK PREDICTION

INDIVIDUAL WEEKLY PROGRESS REPORT — WEEK 3

University	IILM University, Greater Noida	**Session**	2026–27
Programme	B.Tech CSE	**Project Guide**	Ms. Renuka Thakur
Reporting Focus	Project Report Writing, Objectives, Scope and Basic System Workflow		

Objective: To organise the report and describe the proposed system components and workflow.

WEEKLY PROGRESS

Report writing

The report was organised into the abstract, problem definition, literature survey, objectives, scope, feasibility study, references, and plagiarism verification. The problem statement was refined to focus on preliminary risk screening and awareness.

Objectives and workflow

The planned workflow was documented: collect relevant responses, prepare data, train and evaluate a classification model, connect the model to the application, and display a risk category with a clear screening disclaimer. Feasibility and proposed technologies were also outlined.

INDIVIDUAL TEAM MEMBER CONTRIBUTIONS

Bhoomi Srivastava (2410031296) — Helped organise and review report sections, supported documentation of the objectives, scope, and feasibility study, and tracked the remaining material required for the report.

Shubham Manral (2410030301) — Outlined the basic frontend flow, including where users would enter responses and how the prediction result and screening disclaimer could be displayed clearly.

Sagar Bisht (2410030282) — Outlined the backend's role in receiving input, connecting application processing with the prediction step, and returning the result for display in the interface.

Nikhil Singh (2410030311) — Outlined the data and model workflow, including data preparation, feature selection, training candidate classifiers, and evaluating model performance.

Outcome and Next Step

The first structured report and basic system workflow were prepared. The next stage would move into dataset preparation, model training, development, integration, and testing.
